The Site Incident & Near-Miss Toolkit

Everything a UK site needs to capture, classify and act on incidents and near-misses, plus a plain-English guide to what has to go to the HSE.

- 01 The 30-second rule**
why the near-miss you don't record is the one that hurts someone

- 02 A ready-to-use report template**
print it, or fill it on-screen

- 03 The RIDDOR decision flowchart**
four questions. First "yes" wins.

- 04 Near-miss triage**
what to do in the first 24 hours

RECORD. RESOLVE. PREVENT.

jobsafe.cloud

Guidance for UK workplaces. Not legal advice.

START HERE

The near-miss you don't record is the one that hurts someone.

Most near-misses are never written down. Reporting is slow, it's on paper, and “I'll do it later” wins. But an unrecorded near-miss is a warning you never got. Recording the small stuff is how you see the pattern before it becomes an injury.

Legal DUTY

Recording workplace accidents is a legal duty in the UK under RIDDOR 2013 and the accident-book rules.

3 YEARS

The minimum period you must retain reportable incident records.

10/15 DAYS

Days to report specified injuries (10) and over-7-day injuries (15) to the HSE.

Source: HSE, Reporting of Injuries, Diseases and Dangerous Occurrences Regulations (RIDDOR) 2013. Rules and thresholds change. Always check the current guidance at [hse.gov.uk](https://www.hse.gov.uk).

How to use this toolkit

1

Record it.

Use the report template on page 3 for every incident and near-miss, not just injuries. Keep it factual: describe what you saw, not who you blame.

2

Classify it.

Run it through the RIDDOR flowchart on page 4 to see whether it has to go to the HSE, and by when.

3

Resolve and prevent.

Assign the corrective action, close it out, and review your near-misses monthly to spot the recurring risk. Page 5 shows the first 24 hours.

Doing this on paper?

That is exactly the friction that stops reports getting filed. Page 7 shows the same report taking about 30 seconds on a phone.

MINOR INJURY

☐

OVER-7-DAY

☐

MAJOR / RIDDOR

5 IMMEDIATE ACTION & SIGN-OFF

IMMEDIATE ACTION TAKEN / CORRECTIVE ACTION ASSIGNED

REPORTED BY (NAME & SIGNATURE)

DATE REPORTED (DD/MM/YYYY)

DECISION FLOWCHART

Is it RIDDOR-reportable?

Four questions. The first “yes” wins.

Work down the list in order. The first “yes” tells you whether it must go to the HSE, and by when. If in doubt, report it and check with the HSE.

1

A death, or a specified injury?

Most fractures, amputation, loss of sight, serious burns, crush to head or torso, or an injury needing resuscitation or 24h+ admission.

YES ↓

REPORT
without delay · 10 days

↓ NO, NEXT QUESTION

2

Off normal duties for 7+ days?

The worker cannot do their normal duties for more than 7 consecutive days, not counting the day of the accident.

YES ↓

REPORT
online · 15 days

↓ NO, NEXT QUESTION

3

A reportable disease, or a dangerous occurrence?

HAVS, occupational dermatitis or asthma, carpal tunnel, tendonitis, or a listed dangerous occurrence such as a scaffold collapse or lifting-equipment failure.

YES ↓

REPORT
to the HSE

↓ NO, NEXT QUESTION

4

A member of the public taken straight to hospital?

They were injured by a work activity and taken directly to hospital for treatment.

YES ↓

REPORT
to the HSE

No to all four? Still record it.

Not RIDDOR-reportable is not the same as not important. It is still evidence, and still a pattern.

Any “yes” → report at hse.gov.uk/riddor

The phone line (0345 300 9923) is for fatal accidents and specified injuries only.

This flowchart is simplified guidance to help you decide quickly. It is not legal advice and does not replace the full RIDDOR regulations. Categories and thresholds can change, so verify against the current guidance at hse.gov.uk. jobmate Group accepts no liability for reporting decisions made using this toolkit.

NEAR-MISS TRIAGE

The first 24 hours.

A near-miss has a short half-life. If nothing happens by the end of the next shift, nothing happens at all. This is the sequence that turns a near-miss into a prevented injury.

0-15 MIN

Make it safe.

Isolate, barrier, tag out, or stop the task. Nothing else matters until the hazard cannot hurt the next person who walks past it.

SAME SHIFT

Record it while it is fresh.

Facts, photo, exact location, witnesses. Memory decays fast and “I’ll do it later” is where near-misses go to die.

BEFORE HANDOVER

Tell the person who can fix it.

The supervisor or safety lead, not just the site WhatsApp group. Name one owner. An unowned action is not an action.

WITHIN 24 HRS

Assign the corrective action.

One owner, one date, one clear fix. Write down what would have to change for this to be impossible, not just unlikely.

MONTHLY

Look for the repeat.

Three near-misses at the same gate, the same edge, the same lift, is not bad luck. It is the injury telling you where it will happen.

The one rule worth pinning to the cabin wall

If it could have hurt someone and it did not, it still happened. Record it like it did.

THE HONEST COMPARISON

This toolkit works. Paper is what breaks it.

Every line on the template is the right line. The problem was never the form. The problem is that a form on a clipboard gets filled in “later”, and later never comes.

ON PAPER	ON JOBSAFE
✗ Form gets filled in “later”, or never	✓ About 30 seconds, on a phone, on site
✗ Near-misses go unrecorded	✓ Every near-miss captured, photo attached
✗ No pattern, so no early warning	✓ Trends visible to your safety lead
✗ Records scattered across a drawer	✓ One retained, searchable record
✗ Nobody owns the corrective action	✓ Named owner, tracked to close-out

Record. Resolve. Prevent.

jobsafe is incident and near-miss reporting built for the site floor. Record it in about 30 seconds, route it to the right person, resolve it, and see the pattern before it becomes an injury. It is not a checklist app and it never will be.

Do this before Friday

Print the template

Put ten copies in the cabin and one in every van.

Pin the flowchart

On the wall next to the accident book, where the decision gets made.

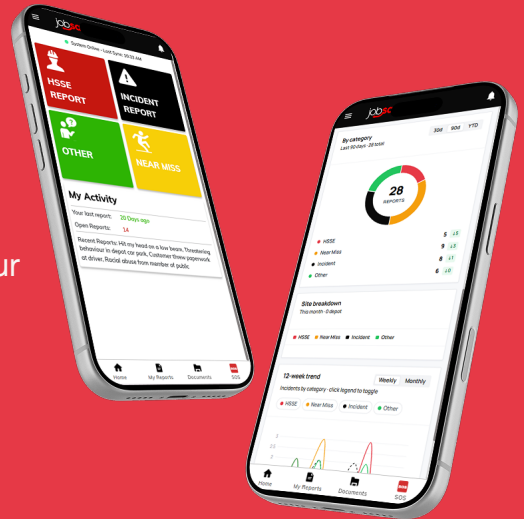

Set the 24-hour rule

Every near-miss gets an owner and a date before the next shift starts.

THE 30-SECOND VERSION

Now do all of that from your phone.

Same report. Same detail. About 30 seconds, in a cab, on a scaffold, or in the rain with gloves on. It routes itself to the right person, tracks to close-out, and the trends land on your safety lead's dashboard without anyone typing a spreadsheet.

£3 PER LICENCE / MONTH

Licence the whole workforce, not just head office.

Days TO LIVE, NOT MONTHS

No consultant, no implementation project, no rollout committee.

30 sec TO FILE A REPORT

On a phone, on site, with gloves on and no signal.

First 200 sign-ups: 6 months free.

From £3 per licence / month. Card required at sign-up, no charge for six months. Start at jobsafe.cloud and have your first site reporting this week.
